FRONTISPIECE.

PHYSICAL AND COMMERCIAL CHART OF THE WORLD.

THE object of this Map is to show, by means of colours and names, the great leading characteristics of the physical features of the globe; and, as depending on these, the chief industrial and commercial productions of its different regions. The simple division of the Earth's surface, by brown and green colours, into highland and lowland; while it marks out the comparative elevation of countries above the level of the sea, conveys a general idea of the distribution of its principal products. Thus we are taught to look for the presence of Minerals and Metals to the elevated or mountainous regions of a country, as the Andes and the table-land of Brazil, Mexico, the Alleghanies and the Rocky Mountains, Sweden, the British Isles, the Ural Mountains and the highlands of Central Europe, Central and Southern Asia, and Australia. For the great centres of Vegetable production we must look to the green-tinted valleys of the Amazon, La Plata, Mississippi, Danube, Indus, Ganges, Nile, and to the vast plains of Northern Europe, Asia, and America.

The region of tropical and sub-tropical Vegetation is marked out on the North and South of the Equator, by blue waving lines indicating the Northern and Southern limits of the Vine. That is to say the limits within which only, the Vine can be grown with profit in a commercial point of view. Beyond these limits the Vine can be grown in the open air or under shelter, but owing to the absence of a high summer temperature, not so as to yield a marketable vintage. Within these same limits are grown for export—**Cotton,** wherever the soil is sufficiently moist; **Sugar** in the United States, West India Islands, Brazil, and the Mauritius; **Coffee** in the West Indies, Brazil, Africa, and Arabia; **Tea** in China, Assam, Western India: and Paraguay tea in the basin of the La Plata. Among the more special or peculiar Vegetable productions of these regions are—**Vanilla** in Central America; the **Cork Oak** in the Spanish peninsula; the **Date Palm** in Africa, Arabia, and Brazil; **Opium** in India, Asia Minor, and Egypt; the **Betel** in India and East India Islands; **Pepper** and **Indigo** in India and South America; the **Cinnamon Tree** in Ceylon; **Spices** in the Molucca Islands; the Aromatic **Gums** in Arabia; the **Gutta Percha** in the Malayan Archipelago; the **Cinchona Plants** in Bolivia, Peru, and Ceylon; the **India Rubber Tree** in the Tropical Regions; and **Brazil Wood** in South America.

Wheat grows within the limits of this region, and extends northwards to the yellow line, including the British Isles, the southern portion of Scandinavia, the United States, and Canada. Beyond this region on the North a red line marks the extreme northern limit of **Grain,** within which **Barley** ripens near the North Cape in Norway. Advancing still further towards the Polar regions a dotted line marks the northern limit of the growth of **Trees,** extending generally to the north of the Arctic Circle in Asia, and south of it in America. Beyond the limit of trees the only vegetation is Grass and Moss, in the steppes and frozen *tundras* of Siberia, and the snowy and icy regions of Greenland, the northern shores and islands of America, Spitzbergen, and Novaia Zemlia. Southward from the limit of the Vine, at the other extremity of the globe, are the fertile islands of the New Zealand group in the East; Patagonia and the Falkland Islands in the West.

Minerals and Metals not being affected by temperature, are more generally distributed over the world than Plants.

Gold is found generally in Palæozoic rocks, in hills having a meridional direction; or in river sands, where the particles of the precious metal are derived from veins which formerly existed in rocks, and have been disintegrated. The great Gold-Fields of the world, as shown by yellow dots on the Map, are, in North America—California, British Columbia, and Nova Scotia; in South America—Peru Brazil, and Chile. It is found also in smaller quantities in Mexico and Guiana. In Europe it is procured in

Ma 63610

Hungary, Sweden, and in small quantities in the British Isles. In Asia the chief seats of Gold Mining are the eastern slopes of the Ural Mountains, and the region of the Altai in Central Asia; it is also found in Tibet, the Malabar Coast of India, Burma, Japan Ceylon, and Borneo. In Australia, New South Wales, and Victoria; and in New Zealand, the provinces of Nelson and Otago. The portion of Africa bordering on the Gulf of Guinea is celebrated for **Gold Dust.**

Silver, distinguished by blue dots on the Map, is found chiefly in undisturbed primitive rocks, mostly in ores, in combination with Arsenic and Cobalt, but masses of pure Silver have been found in Norway two hundred pounds in weight. The famous Silver Mines of Mexico occur in Porphyritic rocks. The richest Silver Mines in the world are those of Mexico, Peru, and Chile, in America. Silver is found also in Canada. In Europe those of Konsberg in Norway, in Hungary, the Harz Mountains, Bohemia, the Tyrol, Spain, and Piedmont; in Siberia and China. Silver is obtained in considerable quantity from the Lead Mines of Cornwall and other places in England.

Copper is found in rocks of the primary and secondary formations, as well as in modern deposits; its ores are combined with a great variety of other metals and minerals. It has been found in a pure metallic state in blocks of several tons weight. The most valuable mines of Copper are found near Lake Superior in North America, in Chile, Cuba, Spain, Cornwall, Devon, Wales, Ireland, Sweden and Norway, and in South Australia, where the Burra-Burra mines, north of Adelaide, yielded in one year 18,692 tons. Copper ores are abundant in Russia, Japan, and South America. There are mines of Copper at Dalecarlia in Sweden, which have been in operation for more than 1000 years. Copper is now exported from the Cape in considerable quantities.

Iron. The ores of this valuable metal are found in nearly every explored portion of the globe. As shown by the red marks on the Map, Iron occurs, in combination with Coal, over vast regions in North America; it is also found in Brazil. In Europe its principal deposits are in Great Britain, Belgium, France, Germany, Spain, Italy, Sweden, Lapland, and in the Ural Mountains. In Asia it is found in India, the south-east Peninsula, Borneo, Sunda, and Java. In Africa, on the South and West Coasts, and in the Island of Madagascar. The finest Iron comes from Styria and Sweden.

Coal, as indicated by black spots on the Map, is widely distributed over the globe, where it is found at all levels, from 8000 feet above the sea in South America, to 1800 feet below that level in England. The principal Coal Fields in Europe are those of Great Britain, Belgium, and France. In North America the Coal Fields, including those of Pennsylvania, Nova Scotia, and Newfoundland, are the greatest in the world. In South America Coal is found in the Andes and in Brazil; and in Asia, India, China, Borneo, Eastern Australia, and New Zealand.

Diamonds are composed of pure carbon, and are the hardest bodies in nature; the first known were brought from India, where the finest in the world have been found at Golconda and Vizapur. They were discovered in Brazil in 1728, and those required for commerce are now chiefly supplied from that country, and from the Cape, where rich deposits were discovered in 1867.

On the Map are marked the two great Provinces of the Fur-bearing Animals of commerce—those of Asia and North America. Of these animals the Sable is the most valuable for its skin.

THE OCEAN.—The commercial and industrial products of the sea are mostly limited to the animals which are hunted for the sake of the oil they yield; these are the Whale, the Seal, and the Walrus. Whales (Cetacea) are divided into three families—1st, the true whale, having whalebone in place of teeth, this is the **Greenland Whale**, pursued for its "blubber" and "whalebone." The 2nd, or corresponding species, is the **Southern Whale** (Balæna Australis). The 3rd is the **Sperm Whale**, inhabiting the warmer seas of the south. It is hunted for its oil, spermaceti, and ambergris. In place of "whalebone," this variety has a large number of conical teeth in the lower jaw, the upper being rudimentary.

Seals are found mostly in estuaries and straits where the fishes on which they feed are most abundant. The principal fields for the Northern Whale fishery are in Davis Strait and Baffin Bay; and for the Seal, East Greenland and Spitzbergen.

Pearls, which give rise to an extensive commerce, are found chiefly near Ceylon and in the Persian Gulf.

Wool is now largely imported into this country from the Cape, Queensland, Victoria, South Australia, Tasmania, and New Zealand.
